Three is beyond the 95% foraging utilisation boundary for these species (see APP-054 for more information) It is therefore considered that no adult breeding guillemot or razorbill will be present at Hornsea Three during the breeding season, and so it is assumed that the population affected will consist of immature and non-breeding birds Hornsea Three is beyond the mean-maximum foraging range

Loch Carron MPA consultation - Frequently Asked Questions ...

Why is the proposed boundary bigger than the current one? Since the urgent designation a further three surveys of the area have been carried out which provide the evidence for the possible MPA The possible MPA is larger on the western side because both the flame shell beds and maerl beds extend beyond the current site boundary On the eastern side the site boundary is slightly smaller because

Learning in local Greenspace - Scottish Natural Heritage

SNH aims to work with a broad range of partners to achieve this target by 2020 It is the intention that the project will inspire many more schools to get involved in outdoor learning in a local greenspace in the future Progress to date and what happens next: - Detailed project planning has been scoped and developed through two national workshops and one-to-one discussions involving a
